Finding Audiovisual Recordings

Use Primo to find audio or video recordings on VHS, LP, CD or DVD in the physical library collection. For best results, I recommend running an advanced search.

Enter the work title and an author name (this could be a composer, director or key performer), and use the Material Type filter to choose whether you want Video/Film or a Sound recording.

Search results show the type of item and where to go in the library to get it. Click on the title or the Available at link to open the detailed record if you need more information to decide whether this is the right recording. For example, the Format field tells you this recording of *La Boheme* is on VHS.
Armacost Library has LP record turntables, VHS/DVD players and CD players in the 2nd floor periodicals area. At the front desk, you can use your student ID card to check out headphones or needles to be used with these devices.
